PROJECTS

Virtual Farmers Market

This web application works as a platform for farmers and traders to communicate and trade.

- ➔ The site is built around the MVC design pattern.
- ➔ Bootstrap, HTML and CSS were used for the front end development
- ➔ The framework used is Laravel
- ➔ Technologie like web-socket and Pusher are implemented to facilitate the real time communication between the farmers and traders.
- ➔ MySQL is used as the database.
- ➔ Created a mobile application using flutter and utilizing RESTful API to allow the Laravel backend to communicate with the flutter front end.

To insure quality and proper functionality of the web and mobile application, white box testing methods like unit testing and API testing were conducted.

Meal Recipe Finder

A site that lets the user find recipes from around the world. The data for the recipes are fetched from TheMealDB API using fetch API.

WORK PORTFOLIO

Innovate Tech — *Front End Developer*

06/2020 - 07/2020

Worked in an eBook project where I fixed broken HTML pages translated from inDesign file format via HTML/CSS.

Inbox IT Solutions — *Web Developer Internship*

09/2019 - 11/2019

Worked as a web developer intern, learned and improved technical abilities, researched and developed a web application using Laravel, and created a mobile application using flutter.

EDUCATION

School Leaving Certificate(SLC)

2015 National Examination Board

+2 Science

2017 National Examination Board

BSc (Hons) Computing

2017 - 2020 Islington College

- ➔ Software Development
- ➔ Information Systems
- ➔ Software Architectures
- ➔ Network and Operating Systems
- ➔ Software Engineering
- ➔ Emerging Programming Platforms and Technologies
- ➔ Databases
- ➔ Developing the modern web
